

## **How to get Freedom**

The Human beings live under a glass cover – with very few exceptions.  
There are 2 groups:

Those that know it and those that believes to act free.

People who suffer can be found in both groups as well as those that act responsible or that do not. There are also happy people but the number is decreasing depending on the tightness of the glass cover. What do I mean by that?

**Everything becomes a commodity and the things that are free decrease more and more:**

We have to pay not only for freedom of speech by the costs for printing or space for the contents but also for the implications because there are people who want us to be silent. Yes – in Russia or China and with the dictators and the corruption of those that are in power in Africa... many people think like this. This is true but it not the complete truth.

Crimes keep on being what they are a violation of the Human Rights – even when they are carried out in a very intelligent manner!

Intelligence, power and control are no guarantee for a life one would like to have lived.

In this combination they are a sign for a way, that can not be sustainable successful.

Why?

**Humans are looking for safety but they also long for freedom.**

A perpetrator is also a Human Being, who will be digested from his inside, if he has no true positive feelings:

For example by greed or envy, hatred or intrigue, striving for power or delusion of control.

Someone who is pleased by the suffering of others will end in solitude if he isn't already.

May be fortune has treated him badly, specifically then an open mind or a good action can help to render his life to a better outcome.

Naturally one has to fight sometimes. RED is the colour of love and not of blood. A never ending cycle of revenge is not a good way! The decade of vengeance has to come to an end; it is no way we are allowed to lead the next generations to continue.

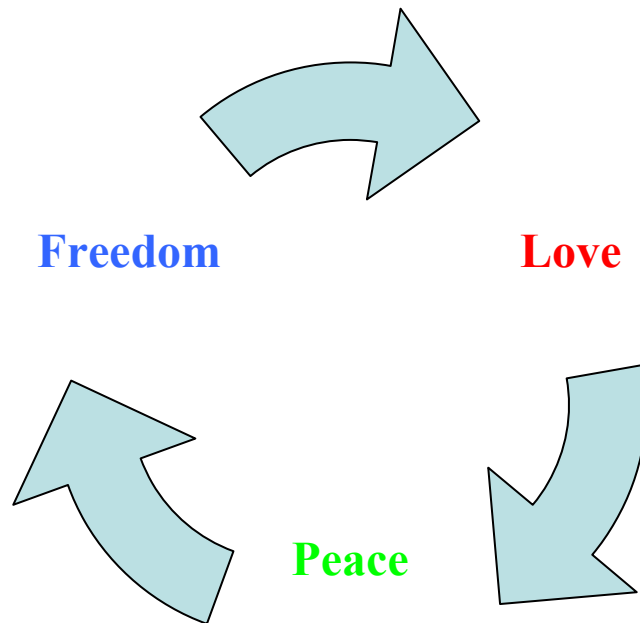

**We do not need more of the same but something different!**

No people or nation, no religion and no group of humans has a natural right that puts it over the others. There is always at least one more option for a problem that has to be solved as one is able to recognize in some situations.

Let us sharpen our focus and let us melt the glass with the aid of light and our human warmth, which comes from our hearts. We should not leave aside the others. We invite all human beings to find peace together with us!

**We do not need this invisible glass cover! It's antiquated ballast!**

**Evolution includes change, we want to create positivity!**

**Love is more intelligent than hatred. It leads to more peace, freedom and less dependence.**

**A change in paradigms is on the agenda:**

Let techniques reduce our working hours!

We don't want to compete till death!

Give a chance for spirit and mind!

Respect manual work!

**This is both: Evolution and Culture!**
